About

The ROOTS Solutions worker cooperative functions to provide sustainable solutions to communities' economic, energy, and food needs now, as well as in the future. Formally organized in August 2013 in Yamhill County, Oregon, we currently have 7 full-worker-owners and 4 candidate-worker-owners, plus a handful of non-member partners. ROOTS is using a community-centered process that blends local industrial, agricultural, social and economic development to foster stability in these areas, as well as nurturing the ecological and cultural well-being of our communities. We have partnered with **ZEnergy** for this project.
